Clean, Green, Money-Saving Transportation - Put an Electric Motor on Your Bike!

Santa Ana, CA: You dump almost 2,000 pounds of carbon dioxide into the environment in just 1,000 miles if you're driving a car of average mileage. That's roughly the entire weight of the vehicle in CO2 every 2,000 miles! Then consider the other toxic emissions, gas and maintenance costs, traffic congestion and noise...it's not a pretty picture.

What's the best environmentally responsible alternative? A new hybrid car? Too expensive... A motorcycle? Well, that needs a special license... Maybe that bicycle

you already have in your garage? Aha - perfect! But you're probably thinking it's too far to pedal to work or school, and you don't want to show up disheveled and covered in sweat. But what if you could enjoy your daily commute on your bike, with the sun on your face and the wind in your hair, without feeling like you're running a marathon? And without polluting the Earth or relying on foreign oil?

You can! Convert your bike to clean electric power with an inexpensive **AmpedBikes Electric Bicycle Conversion Kit**. Imagine having a range of up to thirty miles without pedaling, at a brisk yet comfortable speed of up to twenty miles per hour. Without the need for a motorcycle driver's license or registration, or the expensive gas and maintenance demanded by noisy, smelly gas-powered vehicles. **AmpedBikes'** electric motors create no pollution during operation, and their super-efficient brushless design creates so little drag that you can still pedal your favorite bike without any electric power assist whatsoever. Maximum range varies depending on choice of battery pack, rider weight, wind resistance and road grade, however **AmpedBikes** claims up to twenty to thirty miles on a full charge for a rider of average weight on flat ground with no pedaling - and substantially further if you are pedalling. Which makes your trusty bike ideal for your daily commute, keeping your gas money in your pocket and keeping you completely "green" while doing it!

AmpedBikes Electric Bike Conversion Kits include a replacement front or rear wheel assembly with an integrated high-torque, weather-sealed electric motor; a thumb-activated throttle with LED battery gauge; a computerized control module; replacement brake levers with integrated motor cut-off switches; a 36-Volt SLA Smart Charger; extra handlebar grips, wiring and miscellaneous hardware. Battery packs are available from **AmpedBikes** but are not included in the conversion kits due to the wide variety of battery options.

To learn about the joy and freedom of commuting on your own green-powered electric bike, visit www.AmpedBikes.com, email support@ampedbikes.com or call 714-371-0564.
